

The Integrated HIV Surveillance, Prevention, and Care Plan

...and what it means for CPG members

Carol Crump, MFT

Behavioral Health Specialist

Office of AIDS Prevention Programs

OA's federal partners and Community Planning

- CDC and HRSA have traditionally required three separate statewide planning documents.

Previously:

- Care's Part B Grantees worked with local Planning Councils to produce the *Comprehensive Plan* and the *Statewide Coordinated Statement of Need*.
- Prevention worked with the Community Planning Group to develop the *Jurisdictional HIV Prevention Plan*.

What is the *Comprehensive Plan*?

- The Ryan White Parts A and B *Comprehensive Plan* is an overview of the state's HIV service delivery system.
- The *Comprehensive Plan* identifies unmet needs and gaps in services.
- It presents a three-year strategy for the delivery of HIV services that is guided by goals, objectives, and activities.
- The *Comprehensive Plan* also includes strategies for monitoring and evaluating progress in meeting goals.

What is the *Statewide Coordinated Statement of Need?*

- The *Statewide Coordinated Statement of Need* is an overview of the needs of Californians living with HIV.
- The SCSN is based on epidemiological trends, identified barriers to care, and known service needs.
- The SCSN outlines recommendations for improving the continuum of HIV care.

What is the *Jurisdictional HIV Prevention Plan?*

- The *Jurisdictional HIV Prevention Plan* describes statewide HIV prevention, care, and treatment resources.
- It includes needs assessment and identification of gaps and disparities...
- ...and proposes strategies for addressing them.
- It describes health department, stakeholder, and community collaboration in identifying strategies for coordinating HIV programs.

Prevention and Care: Common Ground

- Identifying those at greatest risk for HIV
- Ensuring access to HIV testing and results
- Prevention with positives
- Linkage to care
- Retention and Re-engagement in care
- Adherence to treatment
- Identifying and addressing health disparities

**Shared priorities + separate plans =
Time for a change!**

The priorities shared by prevention and care are reflected in our respective planning documents...

So combining efforts makes sense!

Acting on NHAS Recommendations

The NHAS recommends *integrated HIV/AIDS planning* and *better coordination of federal programs*.

In February 2014, CDC and HRSA leadership:

- Re-affirmed their support for integrated HIV prevention and care planning groups and activities;
- Announced a common 2016 deadline for the *Comprehensive Plan*, the *SCSN*, and the *Jurisdictional HIV Prevention Plan*; and
- Declared their intent to align guidance, enabling submission of an integrated HIV plan.

California's Integrated Plan and the Community Planning Group

- In 2012, California released its first *Integrated HIV Prevention, Surveillance, and Care Plan*.
- The California Planning group was directly involved in developing and producing the *Integrated Plan*.
- The next *Integrated Plan* will be due in 2016.

The 2016 Integrated Plan will...

- Articulate statewide goals for HIV prevention and care
- Emphasize the populations and communities most affected by the epidemic
- Highlight areas of need, service gaps, and barriers
- Identify health disparities and social and structural determinants of HIV-related health
- Outline activities for implementing goals
- Identify factors for measuring success in achieving goals

What does this mean for CPG?

Based on previous experience, we realize there may be one big concern for CPG members...

OMG!

Please tell me I don't have to write
this thing!

No, you don't have to write it, but...

Your involvement with the Integrated Plan is critical, and may include activities such as

- Participating in assessment of needs and service gaps;
- Obtaining input from providers, consumers, and stakeholders;
- Helping ensure that the Plan is relevant at the local level and is targeted to those most affected by the epidemic;
- Assisting with monitoring and documenting any challenges and successes in its implementation;
- ...and other activities suggested by you or requested by OA as need arises!
